

Appendix F - Minimum information to be declared when a wood briquette product is being offered for sale

Approximately compliant with FprEN 14961-3 Solid biofuels – Fuel specifications and classes – Part 3: Wood briquettes for non-industrial use

Wood Briquette

Class – A1, A2 or B (optional statement)

Moisture – x% moisture maximum to be declared

Size – dimensions in mm

Additives – No statement required if none or type and amount to be stated

Energy content – XXX kWh minimum (for pack or kWh/kg) Net calorific value/ Q

Quantity – minimum weight to be stated in kg or price per kg

Country of origin – UK or more localised region

Notes:

Country of origin is where the tree was growing, unless the source material is a by-product or residue from a wood process which uses more than 50% of the stem wood, in which case the county of origin is as the site where it became a by-product/ residue.

Class B is not recommended for baking ovens.

Other aspects of a briquette are defined by the EN specification with no variance allowed once the class is stated.

For clarification: an A class pellet can use 'chemically untreated wood residues', where the term 'residue' is synonymous with the term 'by-product'
