

Appendix D - Minimum information to be declared when a wood pellet product is being offered for sale

Approximately compliant with FprEN 14961-2 Solid biofuels – Fuel specifications and classes – Part 2: Wood pellets for non-industrial use

Wood Pellets

Class – A1, A2 or B

Diameter – D06 = 6mm or D08 = 8mm

Additives – No statement required if none or type and amount to be stated

Quantity – weight to be stated in kg or price per kg

Energy content – XXX kWh minimum (for pack or per tonne for bulk delivery, or kWh/kg) Net calorific value/ Q

Bulk density – between YYY & ZZZ kg/m³

Country of origin – UK or more localised region

Notes:

Country of origin is where the tree was growing, unless the source material is a by-product or residue from a wood process which uses more than 50% of the stem wood, in which case the county of origin is as the site where it became a by-product/ residue.

Other aspects of a pellet are defined by the EN specification with no variance allowed once the class is stated.

For clarification: an A class pellet can use 'chemically untreated wood residues', where the term 'residue' is synonymous with the term 'by-product'.
